Nursing Program Annual Report – 2013/2014

Instructions

1. One survey report for:

     o Each type of program, and
     o Each campus location.

2. Data fields:

     o All must be completed.
     o If data is not available, please enter N/A to clearly indicate that the data field was not skipped.
     o If count is zero, please enter the numeric/numeral 0.

3. The sum of each student variable **must equal your total** student/graduate count for the program.

4. Please submit completed survey form by **November 21, 2014** to ginger.simmons@state.or.us.

5. Important Note: The faculty appointment list, according to OSBN records, will be sent to you in December 2014. Data related to faculty lists will be compiled from existing OSBN records and no longer repeated in the Annual Survey.

Student Data

A.	Enter the count* of new students admitted between July 01, 2013 and June 30, 2014:	**24**
B.	Enter the count** of new students enrolled between July 01, 2013 and June 30, 2014:	**24**
C.	Enter the count of graduates completing nursing program between July 01, 2013 and June 30, 2014:	**26**
D.	Enter the count of graduation dates between July 01, 2013 and June 30, 2014:	**1**
E.	Enter the count*** of all nursing students enrolled on October 15, 2013.	**53**
F.	Most recent program retention/persistence percentage rate.****	**91.7%**

DEFINITIONS

*Variable A:	Count of new students that accepted offer of admission and are expected to attend the first day of class. <u>Do</u> <u>not</u> include students who did not accept the placement offer or provided formal notice of withdrawal before the first nursing course began. <u>Do</u> include advanced placement and reentry students.
**Variable B:	Count of new students actually enrolled and present for first nursing class. For many, variable A and B will be the same.
***Variable E:	Count of all nursing students – new and continuing.
****Variable F:	If the program does not have a method for calculating retention/persistence rate, use this formula: number of first-year or first term students completing all required courses for the year/term divided by total number of new students admitted to program in the year. <u>Do</u> <u>not</u> include students re-taking nursing courses or entering as advanced placement students in the first year. Note: If the program uses a calculation of students graduating within a specified time period, provide that figure. This variable does not need to reflect the persistence of reported student group from variable A.

C.	Enter the number of ***actual*** precepted placements ***needed*** between July 1, 2013 and June 30, 2014.	26
D.	Enter total count of simulation hours***for program.	27

DEFINITIONS

*Variable A.1:	**Cohort Placement Denial:** A clinical facility is unable to place a clinical group or grants a placement for a portion of the requested clinical group. If a clinical facility offers another way to meet the request, the denial of the first request should be counted. Examples: 1. Nursing program requests to place 6 students on a medical-surgical unit. Facility responds with approval to place 2 students. Count this as one request denied. 2. The nursing program requests placement of 4 students on a medical telemetry unit and the clinical facility offers placement for 4 students on a surgical floor. Count this as one request denied.
**Variable A.2:	**CTA Placement Denial:** A clinical facility is unable to place a student with the Clinical Teaching Associate in the requested area. If the clinical facility offers another way to meet the request, the denial should NOT be counted. Examples: 1. Nursing program requests to place three students with CTAs in the Emergency Department. The clinical agency grants placements for 2 students in the ED and one in critical care. Do not count this as a denial. 2. Nursing program requests to place two students with CTAs on med-surg units. The clinical agency grants placement for only one student. Count this as "1" denied placement.
***Variable D:	**Simulation Hours** - Count those hours students spend in experiences using full scale computerized simulators, virtual reality or standardized patients that are extremely realistic and provide a high level of interactivity and realism for the learner. Multiple parameters of client variables are changing and must be considered by the student to move through the simulation. Experience has a purpose beyond being "checked off" on skills performance.
